

QF09 – ENVIRONMENTAL HEALTH & SAFETY POLICY

Version v1.1

The key principles of our Environment Health and Safety (EHS) policy are:

Management Leadership

Compliance with this policy requires top management leadership and the recognition by all managers that responsible EHS performance is one of our business priorities. Management will provide a framework for setting, implementing and reviewing EHS objectives and ensure enough resources are provided to comply with the policy and meet the EHS objectives. This will include the provision of competent EHS advice and guidance. All managers are responsible for EHS performance and will include specific EHS objectives both in their annual operating plans and business reviews with their management teams. Management will ensure that periodic EHS audits of our operations are conducted to monitor policy compliance.

Product EH&S Aspects

We will work to minimize possible negative EHS consequences associated with our business activities and products. We will inform our customers of potential hazards and proper methods for safe product use and disposal or recycling.

Hazard Identification and Risk Assessment

We will identify and assess the EHS hazards and impacts of our business activities, operations and products and take appropriate actions to manage and control all significant EHS risks.

Compliance with Regulations

We will consistently comply with applicable EHS laws, regulations, industry codes of practice and corporate standards throughout all our business activities, operations and services.

Involvement and Accountability of Employees

We require that employees work and behave safely and in an environmentally responsible manner as conditions of employment. All employees will be accountable for EHS performance. We will properly train employees on relevant EHS topics, ways to protect the health and safety of employees and the community, and methods to protect the environment and property.

ISO 9001:2015 Quality Management System

QF09 – ENVIRONMENTAL HEALTH & SAFETY POLICY

Procurement Controls

EHS performance will be included in supplier assessments where the EHS impacts are significant. We require all contractors working on our behalf and encourage our other suppliers to operate in a manner consistent with our EHS policy and standards.

Emergency Preparedness

We will plan for and take effective actions during and following emergencies in order to protect people on our premises, neighbours, the environment, and our operations.

Effective Communication

We will communicate openly with our employees, contractors, vendors, customers and other interested parties on relevant EHS matters. We will respond in a timely manner to concerns about our EHS performance.

Continual Improvement

We will work towards preventing injury and ill health and improving the overall health of our employees. We will work to minimise the safety and environmental impacts of our business activities, operations, and products. We will accomplish this by continually improving our EHS management systems, including employee training and awareness of our EHS performance, product and process design, engineering change control, operating controls, risk assessment and control, ergonomic workplace design, preventive maintenance, pollution minimization/prevention, environmental sustainability, and resource conservation.

This Policy is consistent with all Forgeco/SCP/Metal Spraying (UK) td World-wide Business EHS Policies and Standards and will be reviewed periodically.
